

# XIBO V4 Beta Test Report

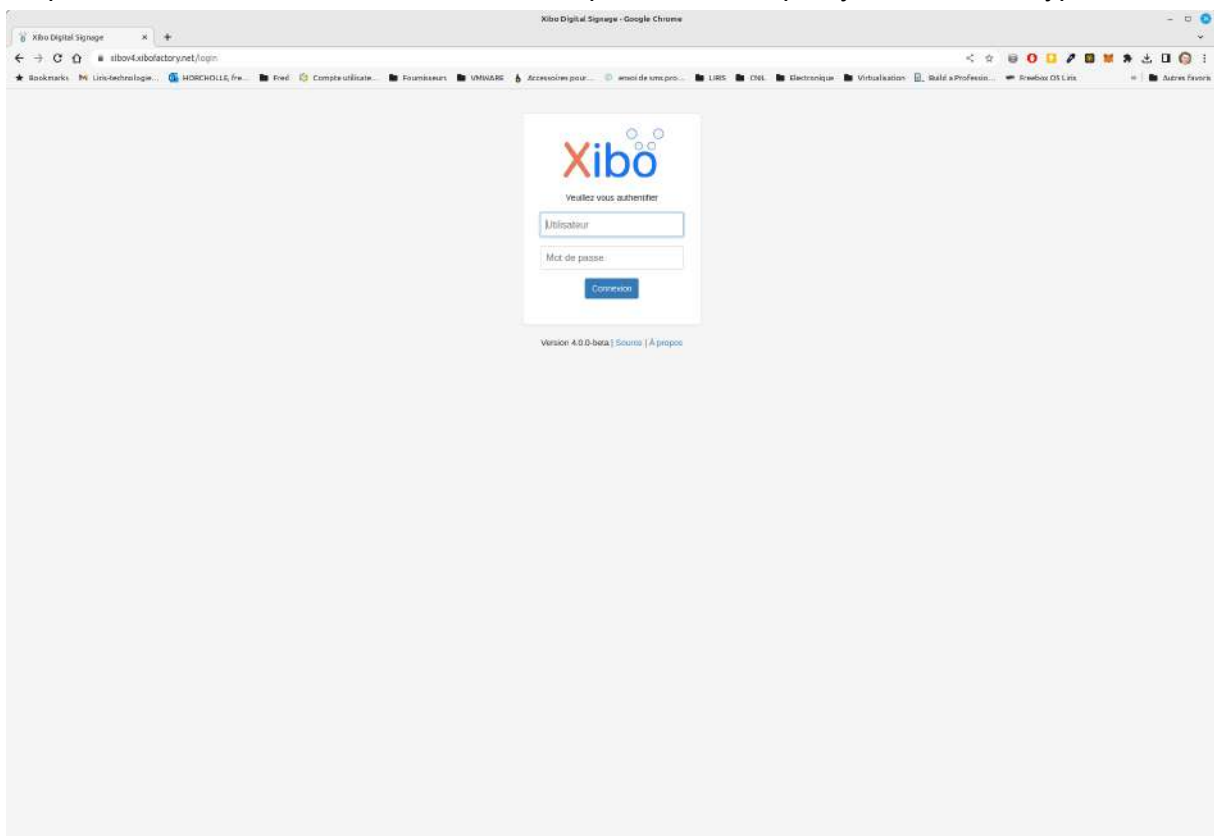

## by Fred HORCHOLLE -

### 2023 / 08 / 04

## Server Installation process

### Docker

No problem to install on Docker Debian 12, Apache reverse proxy, and Let'sencrypt

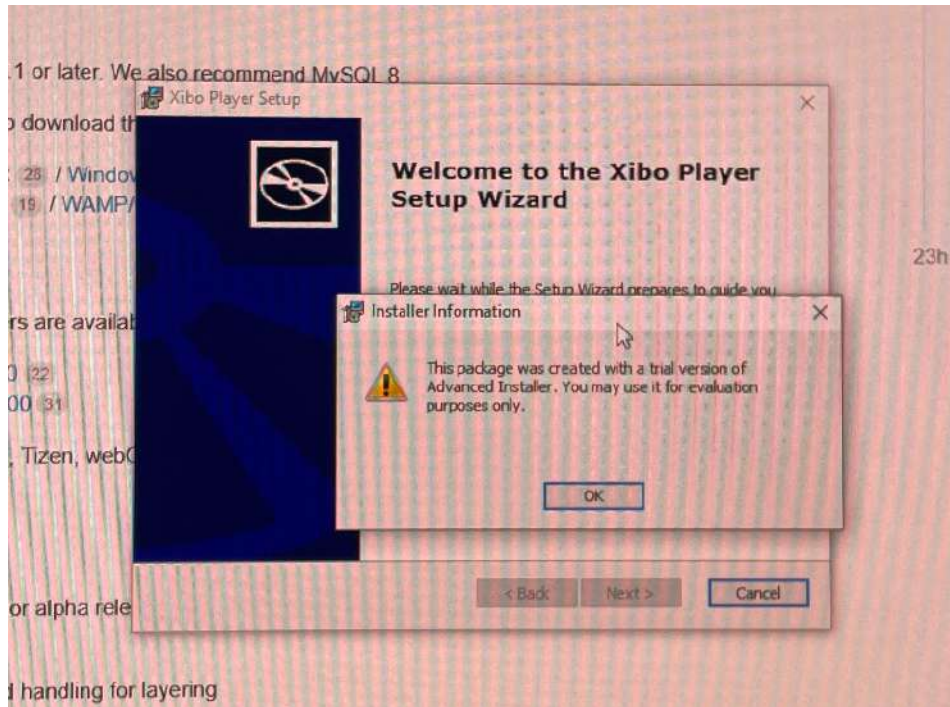

### Apache

Not tested yet

# Client installation Process

OK but this warning message (took from my Iphone, bad quality sorry)

# Focus on Layouts

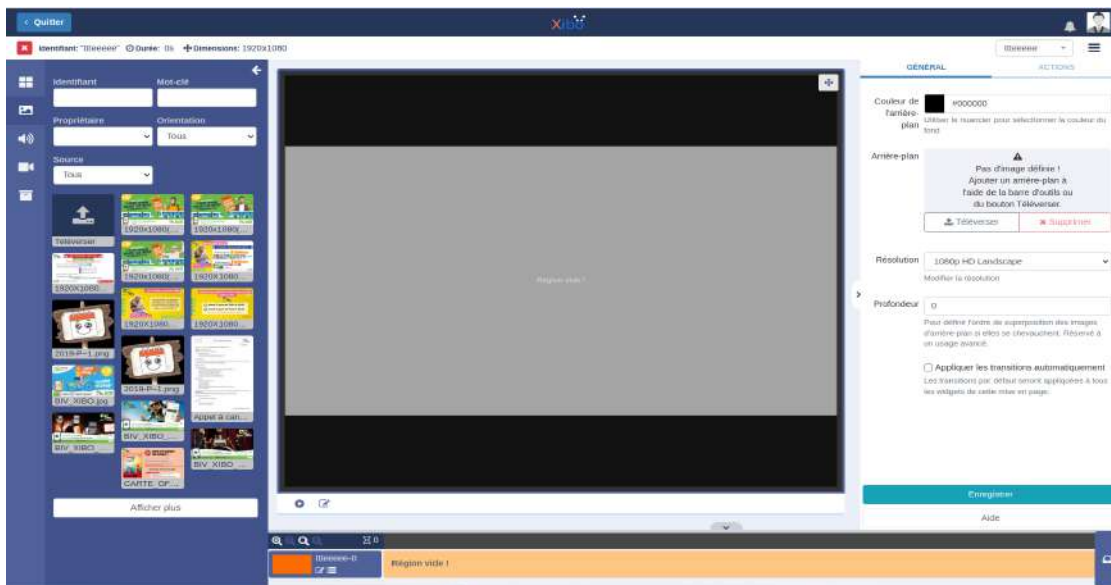

## Add layout

Scale good in English but not in French

Scale good in V3

## Export / Export Process

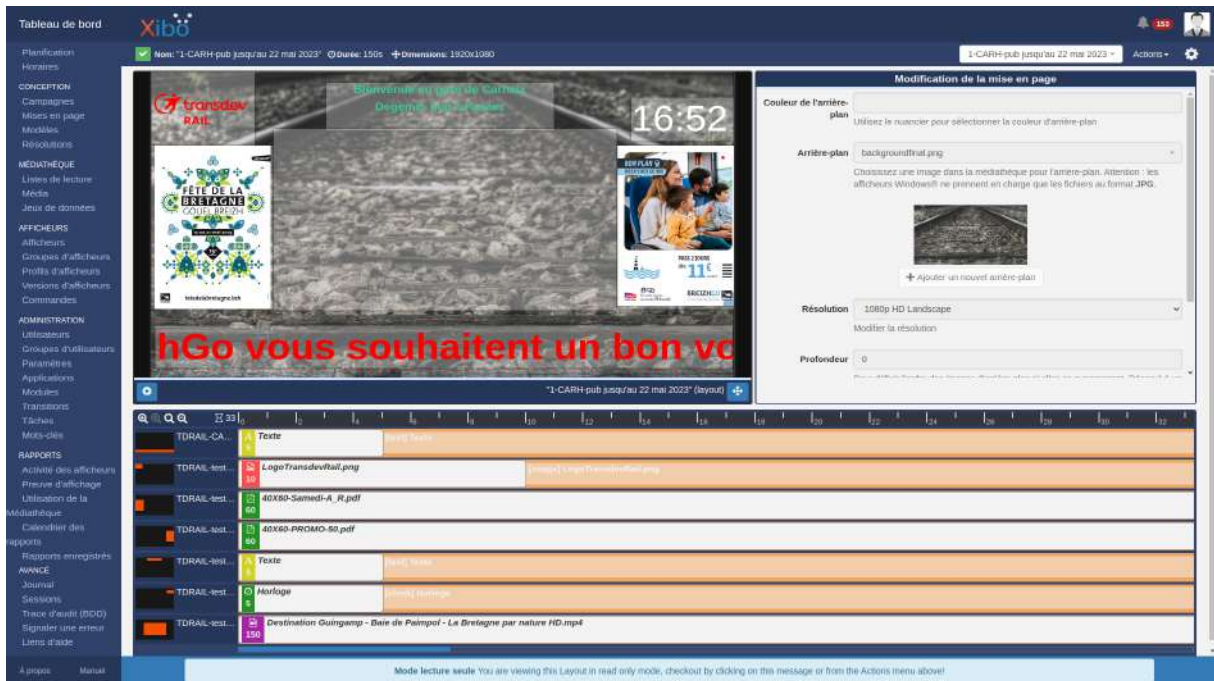

From V2 to V4 OK  
 From V3 to V4 OK

# Design

## First feelings

Oulalala I'm very disappointed and a little bit frustrated. No more Timelines  
As much as I found version 2 better than version 1.8, with the appearance of the timelines, I notice that there's no longer the timeline block at the bottom of the page in design mode. I must admit I'm a bit shocked by this, as it helps with the design.

Example in 1.8

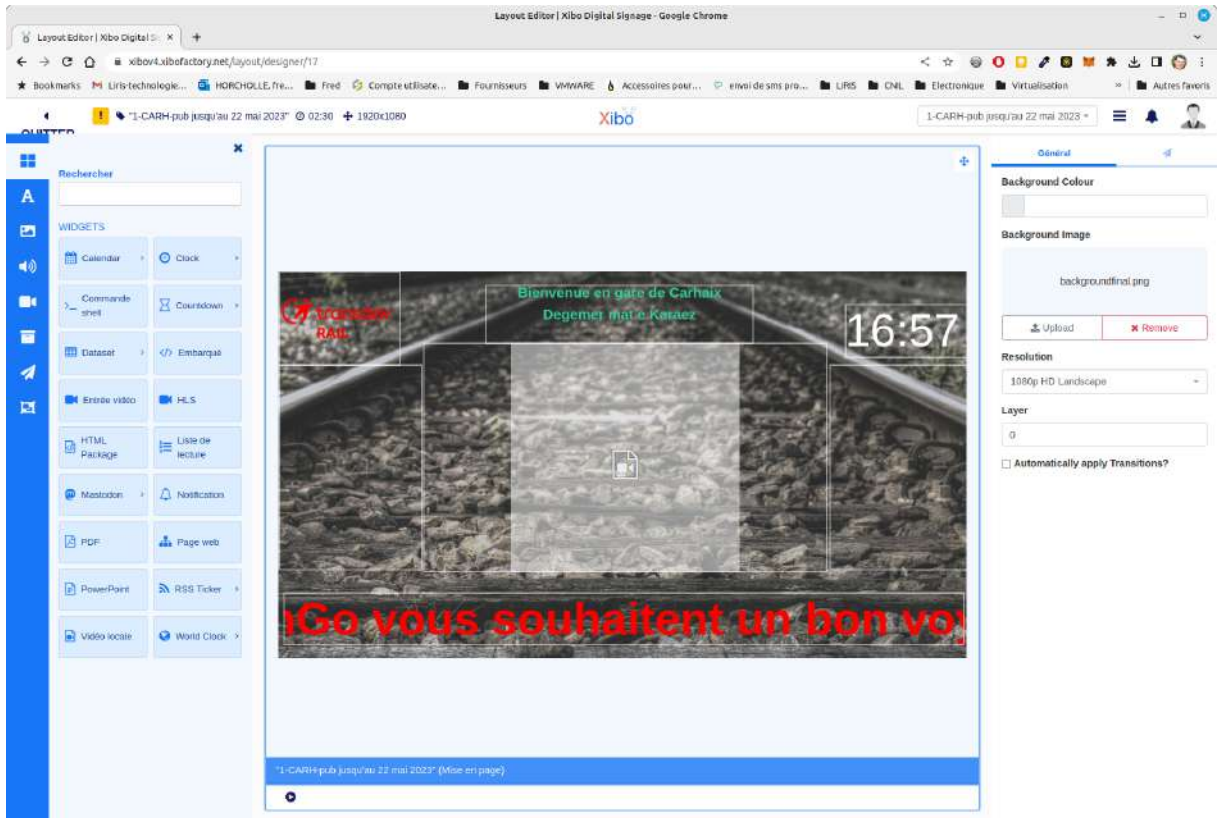

Exemple in V3

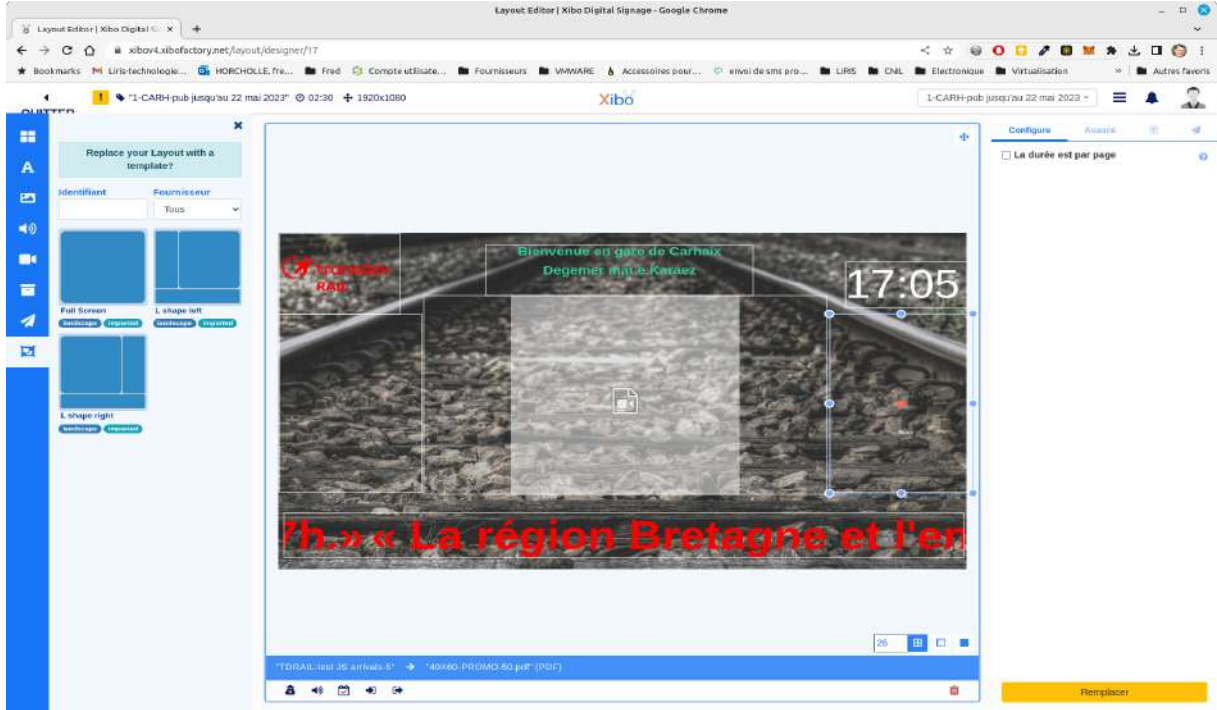

In V4

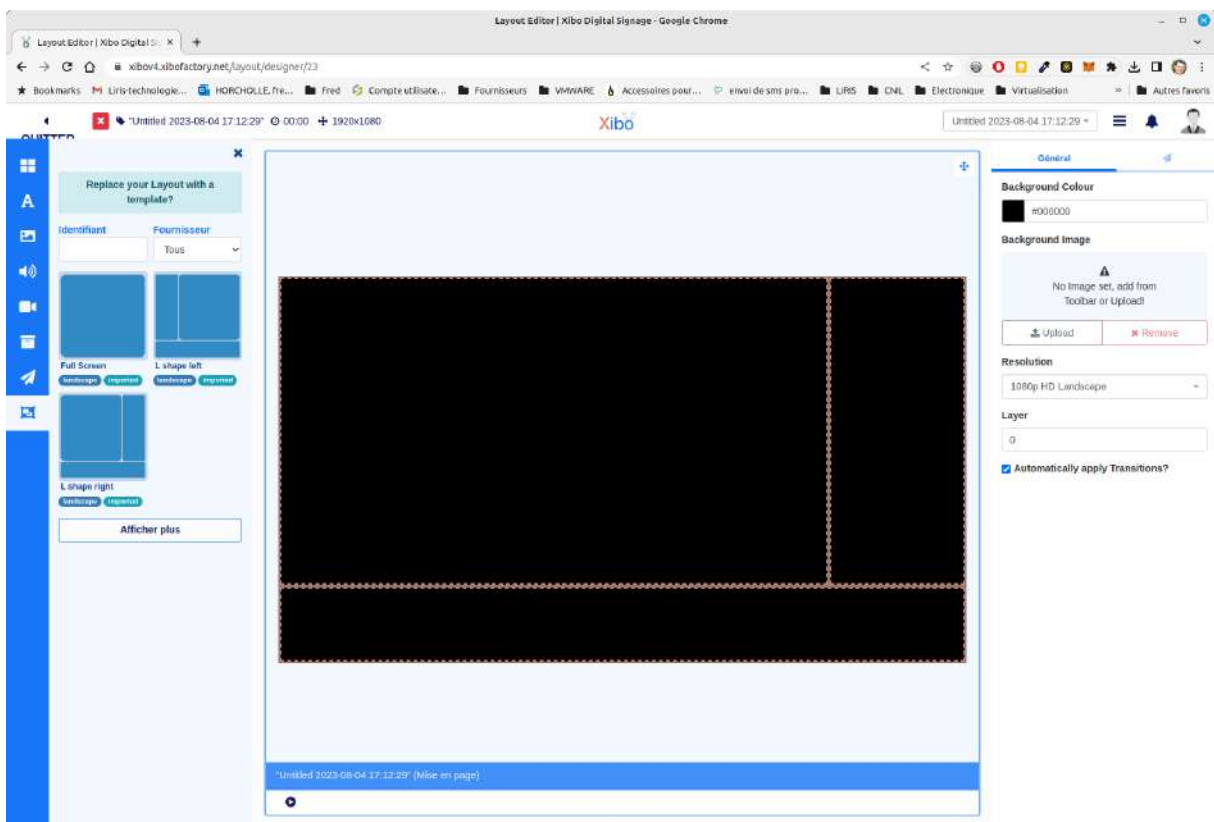

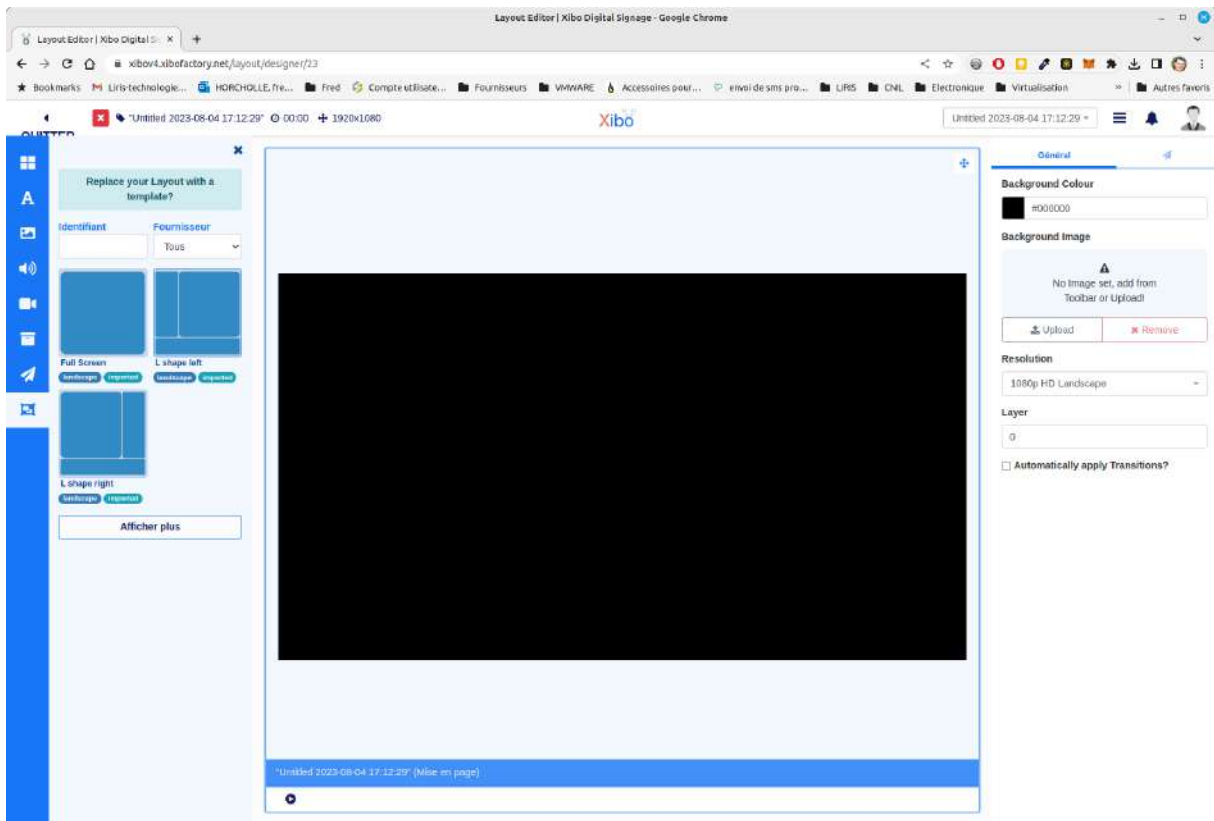

Maybe It should be nice to add this functionality as needed with a ON/OFF button ?

Then No way to add or modify a Region in the layout, or I couldn't work out how to add a new region.

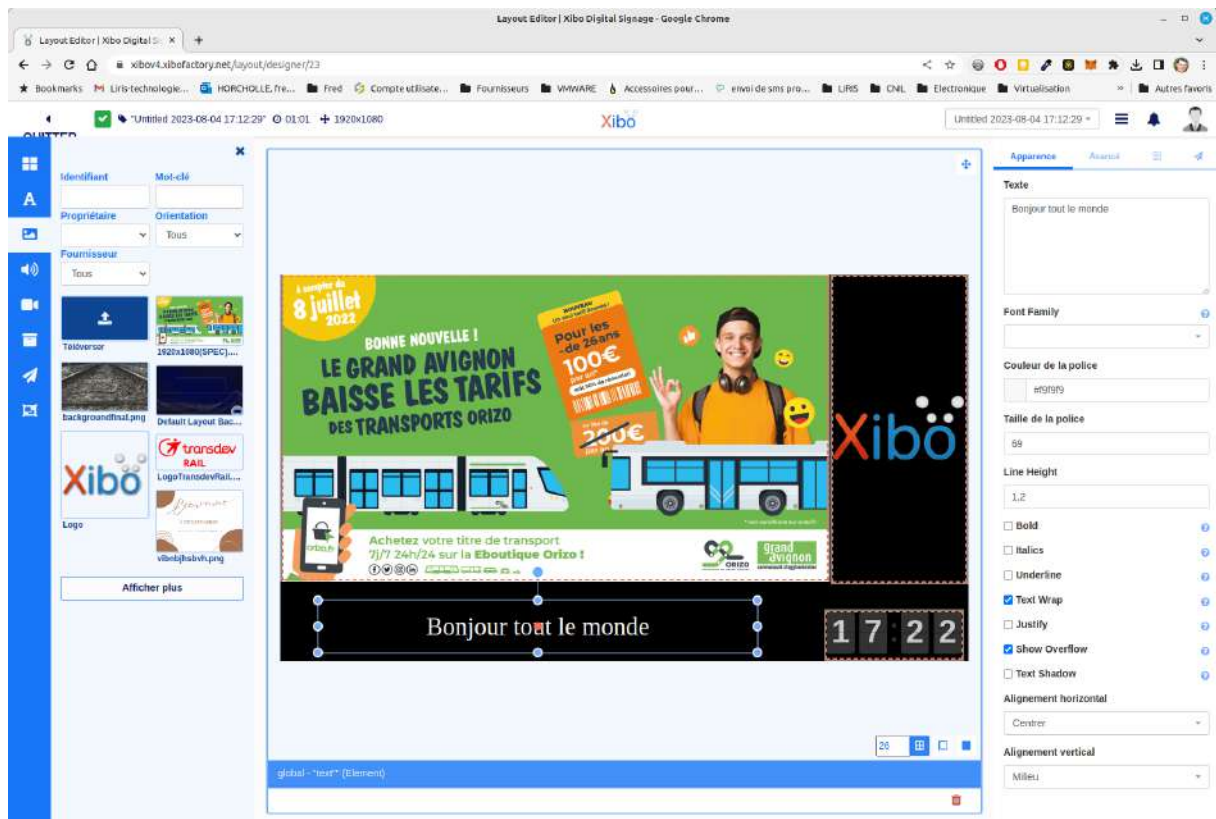

Please reassure me on this point? Design mode is really still in beta :-)

## Try to make en new design

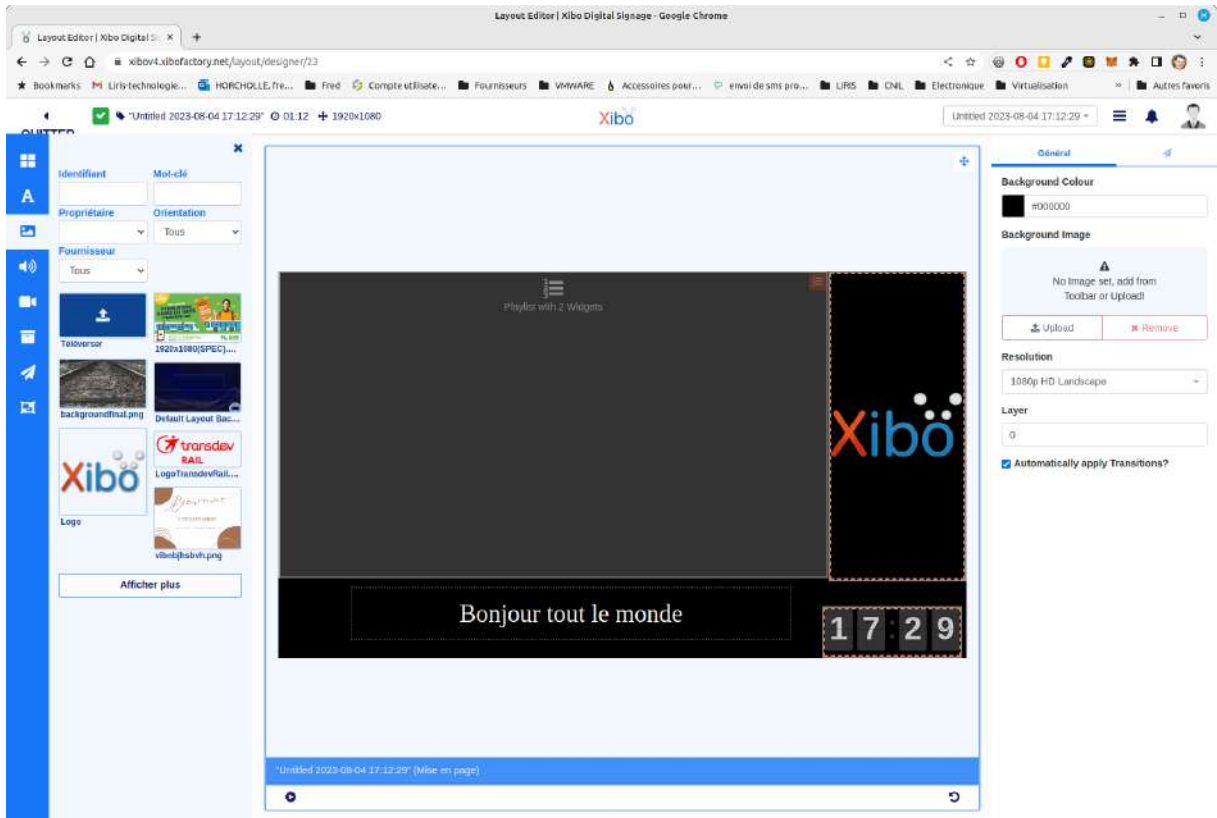

Now that I'm building a page layout, I realise that there's no longer a timeline ... I can position objects anywhere on the page, but I can't intuitively link objects (text / images etc.) in the same region.

Modifying the text widget is no more in the layout but directly on the properties side, why not...

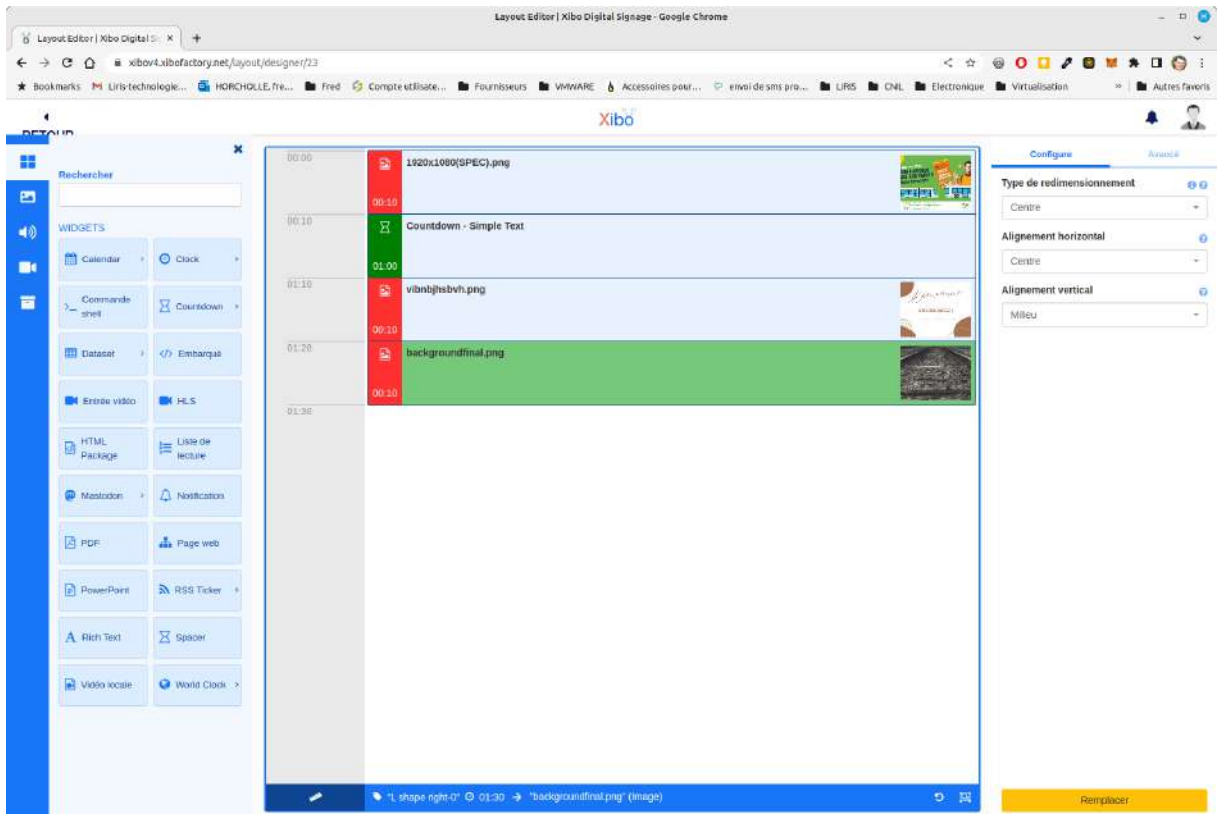

I think it's good to put widgets everywhere in the layout understanding that they will not move while the widgets in regions will.

Good I found howto as a second widgets on a region that becomes a playlist, hihi no preview

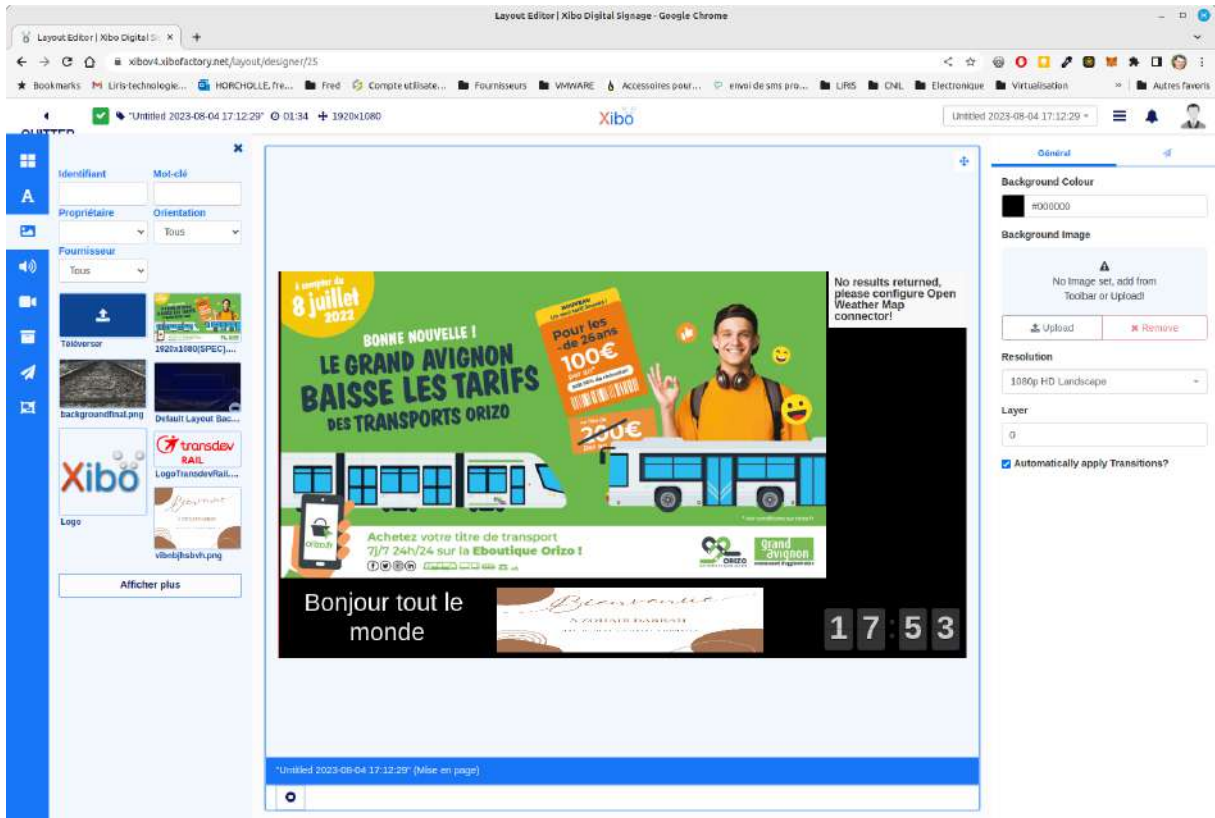

The timelines are missing according to me, the BACK Button in French doesn't fit.

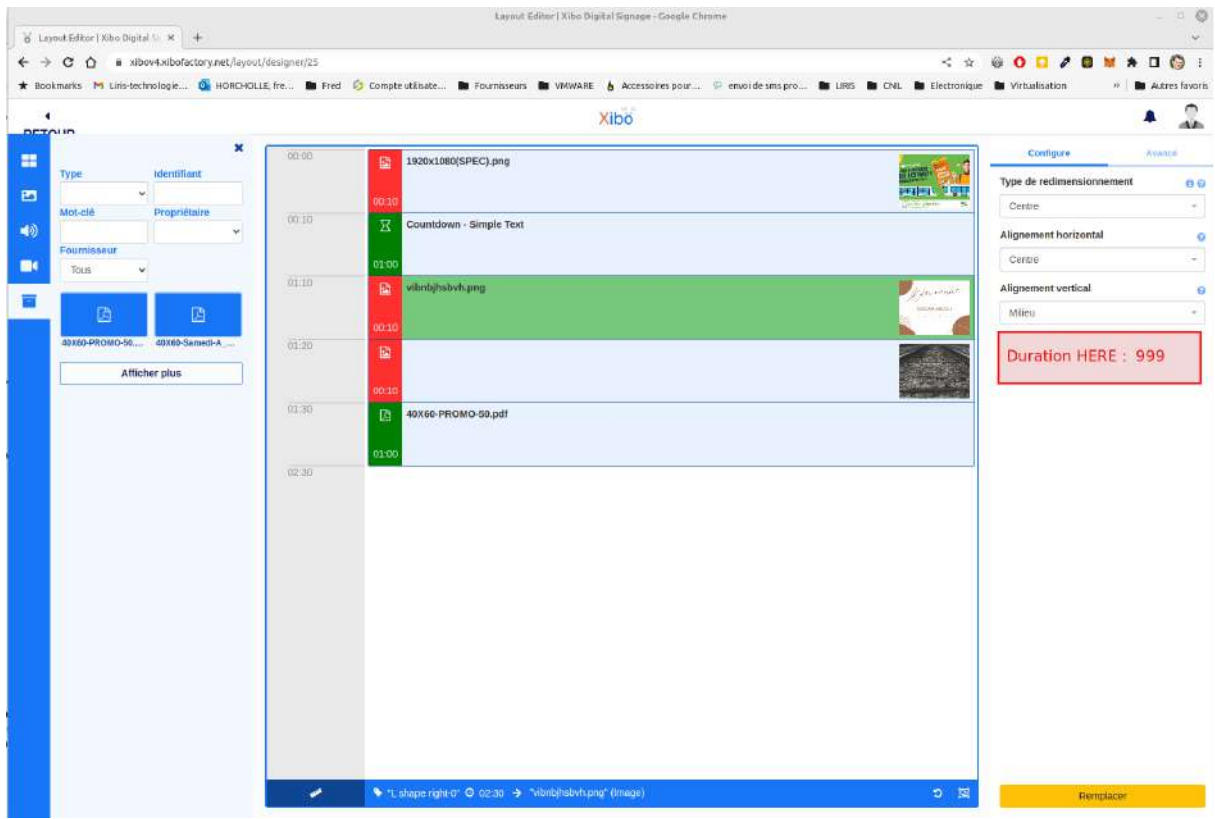

If I want to modify the playlist, OK i double click on the region (Back in 1.7.9, 1.8 versions ahaha ...), yes it's good and quick to add or remove widget in the timeline (playlist) but i miss the timeline.

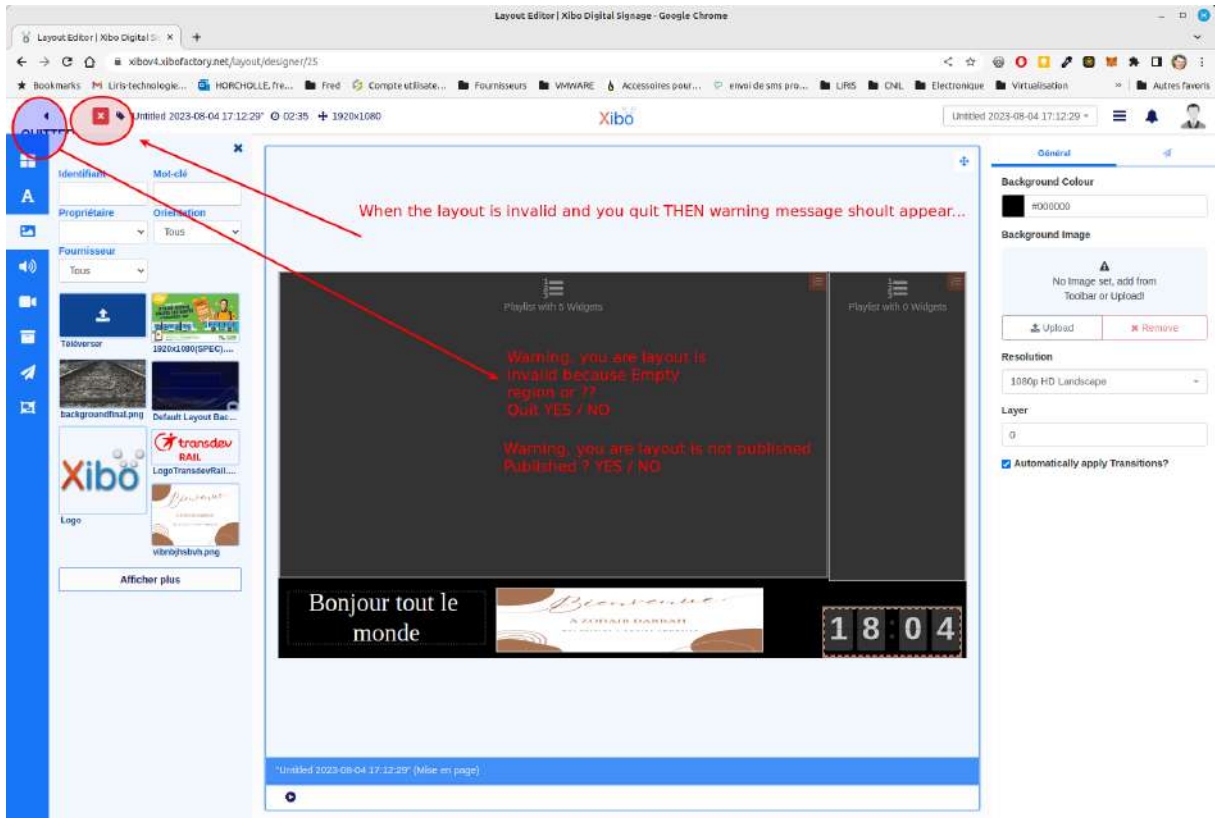

The openweather plugin prepaid version doesn't work.

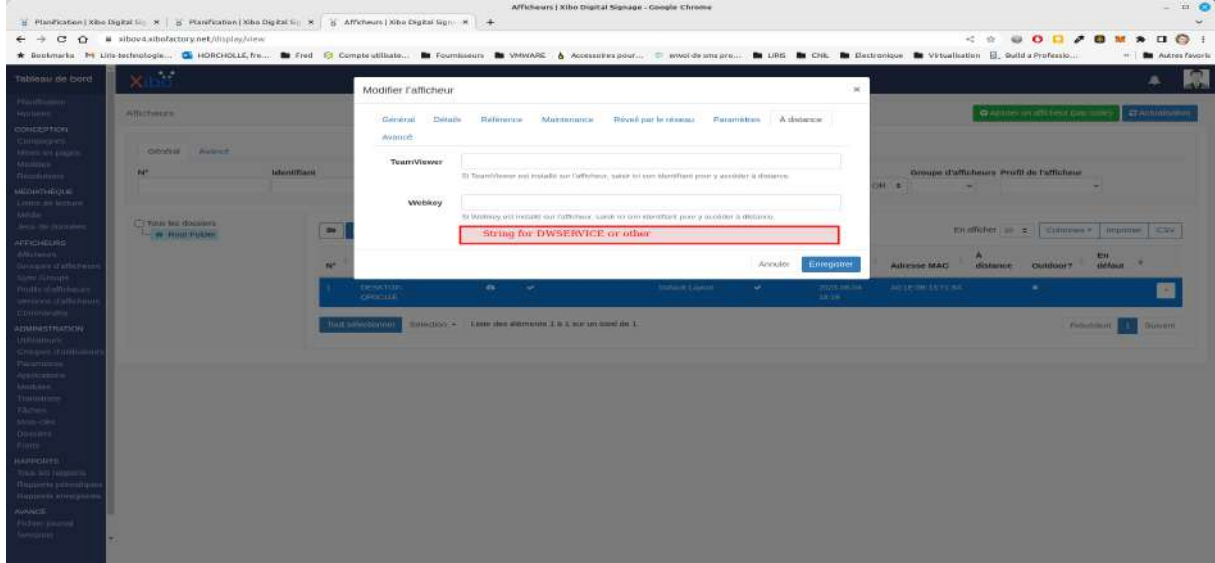

In the timeline, the duration of each widget must be accessible in one click or immediately.

When you quit and the layout is not valid or not published, then you should warn the user, I have many questions about these points. If the layout is invalid and not published then no stream on screen, it sounds good in english 😊

# Displays

A field is still missing to remote access other than TW or webkey

I scheduled a non valid / Draft layout, and no error on display status

N°	Afficheur	Type	État	Activé	Mise en page actuelle	Mise en page par défaut	Connecté	Dernier Accès	Adresse MAC	À distance	Outdoor?	En défaut
1	DESKTOP-QPOC11E			<input checked="" type="checkbox"/>		Default Layout	<input checked="" type="checkbox"/>	2023-08-04 18:19	A0:1E:0B:13:71:8A		<input checked="" type="checkbox"/>	

Tout sélectionner Sélection Liste des éléments 1 à 1 sur un total de 1 Précédent 1 Suivant

This should be improving in V4, first when you leave the designer and then when you schedule an invalid layout.

We should see in action that the layout is invalid or/and in draft mode therefore the layout will not stream on screen

## SCHEDULE

Wahou Grid mode, good idea, but this could be great to choose default mod tab Grid or Calendar. (I prefer calendar mode, but some prefer grid ...)

So I scheduled a very bad layout, invalid and in draft, I should see this somewhere with a warning, this will help many people. Maybe another tab with warning and explanations

The screenshot shows the XIB software interface. On the left is a sidebar with navigation options like 'Planification', 'Média', and 'Afficheurs'. The main area displays a calendar for 'Lundi' with an event '1-CARH pub jusqu'au 22 mai 2023'. Overlaid on this is a 'Modifier l'événement' dialog box. The dialog has tabs for 'Général' and 'Déplanification'. Under 'Général', there are fields for 'Type d'événement' (set to 'Mise en page'), 'Afficheur' (set to 'DESKTOP-QPOC11E'), 'Horaires' (set to 'Always'), 'Mise en page' (set to '1-CARH pub jusqu'au 22 mai 2023'), 'Ordre de diffusion' (set to 0), 'Poids de priorité' (set to 0), and 'Diffusions par heure maximum' (set to 0). A green 'Aperçu' button is highlighted with a red arrow, and a red arrow points to a warning icon in the background calendar view.

When I want to preview an event, campaign, layout, it should be great to have a warning if there is a problem (layout is invalid, or in draft/not published) and get the power to modify it directly in the preview mode
